 Damascus - Syria

 Ahmad Alsebai

SUMMARY

I possess advanced skills in systems analysis and design, and in transforming software ideas into highly efficient and standardized systems. In addition, I have a range of programming skills, from backend web development (such as Django, Laravel, etc.) to some front-end development (such as Bootstrap).

I am seeking a position where I can utilize these skills to contribute to the development and improvement of the work environment.

EDUCATION

Syrian Private University
Bachelor's degree,
Engineering information :
Software Engineering And
information Systems

8/2020-1/2025

IDIOMAS

- Arabic
- English

PROJECTS AND EXPERIENCE

University project (Finder)

1/2024-1/2025

I developed the FINDER project. Its concept is to be a one-stop system for everything a customer might be looking for, and for showcasing a seller's products. This acts as a direct link between buyer and seller, eliminating intermediaries. We started with real estate, developing a system for buying, selling, renting, and renting properties. We hope to expand it to include cars, hotel bookings, and travel.

- Adding a feature to apply for job vacancies through the website
- A dashboard interface for the administrator to add and manage products and users
- Adding a complaints system to the website

Working for Riva Pharma Pharmaceutical Industries

10/2024-2/2025

I worked on developing the official Riva Pharma website. However, the task wasn't limited to development alone; I also photographed, prepared, and added all the company's products to the site, in addition to adding features such as:

- A page to control and track the status of my properties that I have posted (sale or rent)
- Wishlist page: Contains a list of properties you have liked for easy access later.
- User rating system: to eliminate fraudulent users
- In addition to the basic features of these systems

Law firm management system

6/2025-12/2025

I developed a law firm management system for 50 lawyers. It facilitates task allocation among them, includes an administrator and manager tracking system, and archives legal information.

Personal work school management system

6/2025-1/2026

I analyzed the Syrian market to try and fill a software gap in any field. During my in-depth research, I discovered a complete lack of school management systems, encompassing everything from managing and tracking teaching staff, employees, and attendance, to monitoring students, their behavior, performance, and activities. This system consists of :

- Mobile application for parents and students
- Mobile application for teachers
- Web application for management and staff

TECHNICAL & PROFESSIONAL SKILLS

- Systems Analysis & Design
- Web Application Development
- Django Development
- Laravel Development
- Database Management
- Data Analysis
- Front-End Development with Bootstrap and Web Technologies
- Technical Problem-Solving & Decision-Making
- Teamwork & Professional Collaboration
- Remote Work & Collaboration
- Design Tools & Software
-

TECHNICAL SUPPORT SKILLS

- Systems Analysis & Design
- Web Application Development
- Django Development
- Laravel Development
- Database Management
- Data Analysis
- Front-End Development with Bootstrap and Web Technologies
- Technical Problem-Solving & Decision-Making
- Teamwork & Professional Collaboration
- Remote Work & Collaboration
- Design Tools & Software
